

MINUTES N° 030

Governance Committee ZERO Energy

Date: 16 September 2026 **Time:** 9:00 AM **Modality:** Virtual

1. Opening of the session

The ordinary session of the Governance Committee is hereby opened with the purpose of addressing the items on the agenda: participation in industry events, airdrop status, payment gateway review, and other internal management matters. The committee notes that several members are travelling due to professional commitments and are participating remotely.

2. Participation in the blockchain industry congress tour

The committee analyses an opportunity to participate in a series of events within the blockchain and energy ecosystem, taking place between 16 and 27 September 2026 across various Spanish cities. The opportunity has arisen on an urgent basis and allows attendance at no access cost, in exchange for the provision of audiovisual documentation services for a third party.

The event schedule includes, among others, the European Blockchain Convention (Barcelona), a networking event aboard a vessel with investors and startups, a hackathon and entrepreneurship day, technology startup and crypto pioneer events in Madrid, the Venturis Startup Fest in Zaragoza, and the Málaga Gateway Summit, among others.

The committee agrees to the acquisition of the technical equipment required for audiovisual documentation of the events, to be charged to project funds. The financial terms are recorded internally. Likewise, the reimbursement of travel and subsistence expenses arising from participation is approved, with the amounts and settlement mechanism recorded internally. The travelling members commit to providing full accountability for all expenses upon conclusion of the tour.

A dual communication strategy is likewise agreed upon: publication of real-time updates and photographic material from each event, and archiving of audiovisual material for gradual distribution over the coming months. Both lines of action are complementary.

It is noted that attendance at the events is conducted on a professional basis and that all public communications in this regard must comply with the terms agreed with the organisers.

Agreement

- The acquisition of the audiovisual equipment required for event coverage is approved, to be charged to project funds.
- The reimbursement of travel and subsistence expenses is approved; the financial terms are recorded internally.
-

The dual communication strategy is approved: real-time updates and archiving of material for deferred distribution.

- The list of events will be published across the community's channels.
 - A shared folder will be created on Google Drive for the archiving of audiovisual material generated during the tour.
-

3. Airdrop status and technological situation

The committee receives a report on the current status of the recently launched airdrop. It is confirmed that the launch was carried out successfully following an intensive period of preparation. The step-by-step tutorial for the community and the explanatory video of the process remain pending completion.

The committee is further informed that the token scarcity campaign, developed in parallel with the airdrop, has yielded positive results in terms of user acquisition. It is agreed that the scarcity strategy should be consolidated as a continuous and systematic line of action, and that it will be presented at the forthcoming open community meetings.

The need to advance on translations, additional tutorials, integration of new networks, and support for international users is also noted.

Agreement

- The airdrop tutorial will be completed on an urgent basis, prior to the next community meeting.
 - The explanatory video for the airdrop will be completed.
 - A token scarcity strategy will be prepared and presented at the Thursday community meetings.
-

4. Periodic review of the payment gateway

The committee addresses the management of the payment gateway currently in use, agreeing to establish periodic reviews on a weekly basis given the expected volume of operations. The advisability of exploring alternatives that would allow the organisation to have its own, more integrated payment solution is also raised.

Agreement

- A weekly review of the payment gateway currently in use is established.
 - An analysis process will be initiated to evaluate alternatives with a view to implementing a proprietary payment gateway.
-

5. External technical validation — MRV and carbon credits

The committee receives and analyses a technical contribution from an external collaborator highlighting the potential of ZERO Energy's Measurement, Reporting and Verification (MRV) system for application in the carbon credit market. The analysis indicates that the real-time energy production authentication via oracles and smart contracts, with data recorded on blockchain, meets the transparency and immutability requirements demanded by MRV standards. It is proposed that the system could be extended to calculate both avoided carbon (solar and wind energy) and captured carbon (blockchain-connected capture devices).

The committee confirms that these elements are already contemplated within the project roadmap and that ZERO Energy is designed to measure any type of renewable energy generation, with capacity for future expansion.

Conclusion

- The committee takes note of the contribution and confirms its alignment with the strategic vision of the project.
 - A formal response will be prepared for the external collaborator at the next meeting, with the participation of all committee members.
-

6. Access to the ZERO Energy Academy

A query regarding the access procedure for the ZERO Energy training platform is resolved. Access is available through the airdrop, from the project's official website, or from the designated Telegram channel. The registration process is carried out via email address and verification code. Once registered, the browser is linked to the account; to access from a different device, it is sufficient to repeat the process using the same email address.

Information

- Access to the academy is carried out using the registered email address and a verification code.
 - Committee members are requested to use the platform and report any incidents or errors detected.
-

7. Matters deferred to the next meeting

Due to the current workload and the temporary absence of several members, the committee agrees to defer the following agenda items:

- Configuration of the multi-signature wallet (Multisig).
- Definition of the format and frequency of open community meetings.
- Proposal for periodic Ask Me Anything (AMA) sessions with the community in multiple languages.
- Strategic purpose document for the project.

Agreement

-

The above matters are carried forward to the meeting of Wednesday, 23 September 2026, with the attendance of all available members.

8. Closing of the session

With no further matters to discuss, the session of the Governance Committee is hereby adjourned. The next ordinary meeting will take place on **Wednesday, 23 September 2026 at 9:00 AM.**
