

MINUTES N° 032

Governance Committee ZERO Energy

Date: September 30, 2026 **Time:** 9:00 H **Duration:** 1:20 **Modality:** Virtual

1. Opening of the session

The session opens with the objective of reviewing pre-sale milestones, product progress, the events calendar, and coordination with the collaborators ecosystem. A constrained speaking dynamic is established to optimize time, and it is recalled that unresolved matters will be addressed in the next meeting.

Agreement

- It is agreed to apply strict timeboxing per item with limited interventions.
 - It is agreed to carry over to the next session any matters that are not concluded.
-

2. Pre-sale milestones and "three clocks" panel (time, capital, and community)

The committee analyzes the proposal to publish a panel with three public indicators: remaining pre-sale time, capital progress, and community size. Discussion focuses on the closing condition and the need to provide temporal clarity, in addition to subsequently defining internal reference objectives for capital and community.

Agreement

- It is agreed to set the pre-sale end date as December 31, 2027 at 23:59, with the time zone to be defined by the technical area.
 - It is agreed to enable a claim window of six months from the day following the closing, until June 30, 2028.
 - It is agreed that the date will be the only closing condition; the capital and community indicators will be presented as informational objectives.
 - It is agreed to postpone to the next session the definition of minimum and optimal targets for capital and community; the economic terms are recorded internally.
-

3. Update on the event tour

The committee reviews the recent balance of presence at events, assessing its impact on image and network. The committee prioritizes, in the short term, the execution of the airdrop, the activation of agendas, and direct conversion-oriented training, adjusting presence at events according to their contribution to traction objectives.

Agreement

- It is agreed to complete the scheduled event and, thereafter, temporarily pause the tour to concentrate efforts on the airdrop, sales, and direct training.
 - It is agreed not to incorporate new events of the same profile in the short term.
-

4. Product development (Master Document, dashboard, and contracts)

An update is provided on the advanced status of the Master Document and on the functional specifications of the dashboard (Cerodex). Availability to commence frontend work is confirmed, and the need to remove examples of contracts that are not in force is underscored to avoid confusion.

Agreement

- It is agreed to finalize the Master Document including only current contents and examples, together with the current specifications of the dashboard.
 - It is agreed to commence frontend work based on said document and on the mock-up of the indicators panel.
-

5. Policy on links, referrals, and transparency

The management of potential referral programs for external services that the community may need is addressed. The use of official links is prioritized, as is obtaining tangible benefits for the community, ensuring internal transparency when individual incentives exist.

Agreement

- It is agreed that, by default, official ZERO Energy links will be used in all materials and tutorials.
 - It is agreed that any third-party incentive linked to links or referrals will be declared internally prior to its potential dissemination.
 - It is agreed to postpone to the next session the definition of an internal protocol on the use of links and transparency, for its subsequent vote; operational details will be addressed internally.
-

6. Collaborators ecosystem and benefits for the community

The committee consolidates the strategy for an ecosystem of collaborators (training, security, technical integrations, support, merchandising) that will accompany the airdrop and conversion, delivering differentiated value to users. The importance of cross-visibility of logos and prioritizing a direct purchase funnel is highlighted, avoiding dynamics that slow down conversion.

Agreement

- It is agreed to prioritize concrete benefits for the community and cross-visibility of logos with trusted collaborators.
 - It is agreed to use branding and support agreements without introducing dynamics that slow down conversion, prioritizing the direct purchase funnel.
 - It is agreed to present, alongside the airdrop, a catalog of ecosystem benefits to reinforce perceived value.
-

7. New proposals and focus

Collaboration proposals in non-core areas and a future line of educational merchandising are presented. After assessing their fit, it is decided to maintain focus on the project's immediate objectives to ensure traction and clarity of message.

Conclusion

- It is agreed to maintain focus within the project's crypto-energy scope (airdrop, conversion, and training) and, at this stage, not to open lines outside the core.
 - It is agreed to defer the educational merchandising line and reassess it after the main pre-sale milestones.
-

8. Incentive structure, benefits gating, and "merits"

There is a discussion on how to offer ecosystem benefits without diluting their value from the outset. Unlocking schemes by investment tiers and/or referral actions are proposed, as well as the potential creation of a redeemable "merits" system linked to the use of the platform and ecosystem services.

Agreement

- It is agreed to start with open benefits to accelerate the airdrop and to design in parallel an unlocking structure by investment tiers and/or referral actions.
 - It is agreed to study the implementation of a redeemable "merits" system linked to the use of ecosystem services and its integration into the platform.
 - It is agreed to request a proposal for a tiering scheme and gradual rollout for review in upcoming sessions.
-

9. Closing of the session

With no further matters to discuss, the session of the Governance Committee is hereby adjourned.
