

MINUTES N° 026

Governance Committee ZERO Energy

Date: 19 August 2026 **Time:** 9:00 AM **Duration:** 1h 58 min **Modality:** Virtual

1. Opening of the session

The committee holds its weekly governance meeting with the attendance of the majority of its members. Two justified absences are recorded. The main objectives of the session are to review the status of the project's communication materials, analyse technical incidents on the platform, and coordinate pending tasks ahead of the project's upcoming milestones.

2. Status of communication materials — Landings and team profiles

The committee reviews the status of the project presentation pages currently under development, including the masterclass landing page and the team presentation landing page. Materials pending submission from certain members are identified, specifically photographs and introductory texts.

Agreement

- It is agreed to use the photographs available on the project's official channels for those members who have not submitted an alternative image before the established deadline.
 - It is agreed to standardise all team photographs using editing tools, applying a uniform visual style (background, framing and proportions) to ensure consistency in the public presentation.
 - It is agreed to include the title or role of each committee member alongside their photograph on the landing page, in order to reflect the project's governance structure.
 - It is agreed to add an explanatory section on the ZERO Energy DAO model to the team presentation page.
-

3. Use of third-party logos and imagery — Legal framework

The committee analyses the legal requirements applicable to the use of logos belonging to collaborating entities, as well as images or testimonials from individuals associated with the project in public materials.

Conclusion

- The need for explicit and documented authorisation for the use of logos belonging to collaborating entities is acknowledged, particularly as the project gains public visibility. In the meantime, the committee proceeds with the resources currently available, noting that the formal written formalisation of these permissions is a priority task in the short term.
-

Regarding testimonials and images of individuals, the committee agrees on the following criteria: (1) captures from public videos or interviews in which individuals participated voluntarily may be used; (2) approximate testimonials will be drafted for validation by the parties concerned prior to publication; (3) photographs extracted from social media platforms will not be used without explicit consent; (4) the complete landing page will be shared with those involved for joint review before its definitive publication.

4. Project partners — Update and integration into materials

The committee reviews the list of confirmed collaborating entities and the associated benefits to be communicated to the community through the project's landing pages.

Information

- The following have been confirmed as project partners: an internationally recognised exchange, the project's official wallet, the official technology developer, and a sector event focused on blockchain infrastructure. Details and descriptions of each collaboration will be incorporated into the public materials in due course.
 - One of the technology partners will develop a smart contract solution aimed at simplifying the token purchase experience for new users, eliminating common technical friction points in the process.
 - It is agreed to confirm with additional partners currently in the onboarding process what specific offer or benefit they will contribute before including them in the public materials.
-

5. Technical incident on the platform — Numeric format in balance-based purchases

An incident is reported, detected by several committee members when performing token purchase operations using available platform balance. The issue is related to the decimal separator used: the system generates a generic error when the user employs a comma as the decimal separator (European convention) instead of a full stop (Anglo-Saxon convention).

Agreement

- It is agreed to report the incident to the development team as a matter of urgency. The points to be corrected are: (1) inconsistency in the numeric format displayed across different screens of the platform; (2) an uninformative error message, which must be replaced by a clear notice indicating the expected format according to the user's geographical region.
 - While the correction is being implemented, users are advised to verify the numeric format displayed by the platform on each screen and to use it consistently.
-

6. Update of graphic materials — Project icon and events gallery

The committee reviews the project's graphic elements and takes decisions regarding their update.

Agreement

- It is agreed to replace the previous project icon with the new official icon across all materials, pages and platforms where it appears, on the grounds that the new graphic element offers improved legibility and visual consistency.
 - It is agreed to incorporate a photographic gallery section of past events at the end of the team presentation landing page, with the aim of showcasing the project's track record and activity. This section may be progressively expanded as new events take place.
-

7. Masterclass landing page — Content clarifications

The committee clarifies the functioning and relationship between the masterclass landing page and the airdrop landing page, given the possibility that both may receive traffic independently.

Conclusion

- It is confirmed that both landing pages may receive direct access without the user having previously visited the other. The tokens associated with each action (airdrop and masterclass) are independent and cumulative. The content of each landing page is maintained as planned.
 - A minor correction to the title of the masterclass landing page is likewise confirmed, adopting a more precise formulation.
-

8. Closing of the session

With no further matters to discuss, the session of the Governance Committee is hereby adjourned.
