

MINUTES N° 031

Governance Committee ZERO Energy

Date: 23 September 2026 **Time:** 9:00 AM **Modality:** Virtual

1. Opening of the session

The Governance Committee holds its ordinary session n° 031 on 23 September 2026. The meeting addresses three main blocks: the technical management and dissemination of the airdrop process, the restructuring of the project's digital tools, and the planning of upcoming community activities.

2. Technical issues in the airdrop process and social media blocks

The committee analyses the friction points identified in the airdrop process, affecting both the user experience and the project's visibility on social platforms. It is noted that certain platforms automatically block publications containing specific terms or direct links associated with the airdrop.

Agreement

- A rule is established prohibiting the inclusion of direct links or terms that trigger the algorithmic filters of social platforms. Neutral alternative terms shall be adopted in all public communications.
 - It is agreed to postpone the mass social media dissemination campaign until the tutorials and the complete process have been validated and are functioning correctly.
 - It is agreed to produce a comprehensive tutorial of the airdrop process, accompanied by screenshots and explanatory text, in order to facilitate the user experience.
 - The necessary steps shall be taken to restore access to the accounts affected by blocks on external platforms.
-

3. Dissemination strategy through direct channels

In light of the limitations identified on social media, the committee reconsiders the dissemination strategy in favour of direct communication channels. The potential of the community's leadership groups as a lever for organic outreach is acknowledged.

Agreement

- Immediate dissemination shall be channelled through direct messaging applications (WhatsApp and Telegram) while the social media blocks are being resolved.
- It is agreed to activate the community's leadership groups so that they may share the project opportunity directly among their contacts.

- A routine for acquiring new contacts shall be defined in order to structure and systematise this activity.
-

4. Planning of community calls and upcoming events

The committee reviews the agenda of community activities scheduled for the coming weeks. The feasibility of organising a community call as preparation for the October event is analysed.

Conclusion

- The community call initially proposed for 30 September is placed on hold due to the unavailability of committee members. The event of 7 October is maintained as a reference point in the planning horizon. The alternative date for the preparatory call shall remain pending and will be defined at the next session.
-

5. Redesign of the welcome page and getting-started section

The committee analyses the current state of the project's welcome page and concludes that it requires restructuring in order to improve the initial presentation to new visitors.

Agreement

- The main welcome page shall be redesigned to incorporate expandable sections including: introductory videos, team presentation, business plan, master documents, and access to the project's artificial intelligence agent.
 - Technical guides, registration tutorials, and operational tools shall be moved to a secondary page linked from the main page, keeping the home page as the project's primary presentation.
 - The changes shall be carried out on the existing structure, without the need to create a new page from scratch.
-

6. Standardisation of the duplication process

The committee establishes a replicable and straightforward process for the onboarding of new participants, with the aim of facilitating the scalability of the project.

Agreement

- The standard duplication process is established in four steps: (1) joining the Telegram channel, (2) accessing the welcome funnel, (3) registering via the corresponding link, and (4) sharing photographic confirmation within the community.
 - This process must be followed strictly and replicated by all committee members and leadership groups.
-

7. Automation of the flow through digital tools

The technical infrastructure is defined to manage the contact flow and follow-up of new participants in an automated manner.

Agreement

- A new account shall be implemented on the ManyChat automation platform, with flows configured for contact follow-up.
 - A landing page shall be created featuring two videos — an introductory video and a project presentation video — as the entry point of the acquisition funnel.
 - The corresponding step-by-step tutorials shall be produced and the necessary videos shall be recorded to complete the flow.
-

8. Development of version 2 of the gamified academy

Progress on the evolution of the project's training platform is reported.

Information

- The project's academy is advancing towards a version 2 with a gamified format, inspired by progressive learning models, which will include a ranking system to make the training process more dynamic and participatory.
 - The project's invitation links shall provide dual access: to the airdrop process and to the academy, enabling each member to share the most suitable option according to the profile of their contact.
-

9. Closing of the session

With no further matters to discuss, the session of the Governance Committee is hereby adjourned.
