

MINUTES N° 033

Governance Committee ZERO Energy

Date: October 7, 2026 **Time:** 9:00 AM **Duration:** 02:06 **Modality:** Virtual

1. Opening of the session

The session begins with the validation of the agenda and the objective of reviewing operational progress, governance decisions, and immediate priorities. It is agreed to optimize time by grouping items when appropriate.

Agreement

- It is agreed that session moderation will prioritize expediting items with less debate to cover the planned agenda.
-

2. Attendance rules and formalization of the Committee pact

The previously agreed attendance rules are reviewed and the need to formalize them in writing through electronic signature is addressed. It is proposed to have the document available in Spanish and English and to file it internally.

Agreement

- It is agreed that the Committee's operational pact/statutes (ES/EN) will be formalized via electronic signature and sent to all members for their express acceptance.
 - It is agreed that an electronic signature process will be established with defined deadlines and that its followup will be channeled through internal means.
 - It is agreed that the document will be published internally and the signatures recorded in the minutes.
-

3. Events review, obtained material, and qualitative return

An operational overview of recent events is presented, together with the inventory of acquired assets and the audiovisual material generated, highlighting their usefulness for public presence and relationships. The qualitative return obtained is assessed.

Agreement

- It is agreed that the operational breakdown will be shared and any minor adjustments identified will be resolved internally.
- It is agreed that the generated material will be leveraged across the project's official channels.

- It is agreed that the incorporation of thirdparty technical reviews will be considered, with details reserved for internal documentation.
-

4. Extraordinary income from third parties (framework and internal record)

The internal framework for managing extraordinary income from third parties is presented, focused on operational criteria, with details reserved for internal documentation.

Agreement

- It is agreed that an internal framework will be established for handling extraordinary income in accordance with the project's principles, recording its management in internal documentation without detailing categories or allocation criteria in the public minutes.
-

5. Product progress: on-chain frontend (Zero DEX) and smart contracts

The mockup of the decentralized dashboard (wallet connection, staking, claim, governance) and the onchain delivery plan for internal testing are presented. The future onchain platform is distinguished from the current offchain platform.

Agreement

- It is agreed that the planned timeline will be maintained as a target (presale closure by end of 2027; claim and initial onchain activation at the beginning of 2028, with an estimated sixmonth window), subject to technical and regulatory adjustments communicated in due course.
-

6. Tokenomics Master Document

The availability of the technical master document (noncode) describing contracts, tokens, and main flows is confirmed. Its relevance and the advisability of a thorough reading are emphasized.

Agreement

- It is agreed that all members will study the document and log questions through the internal channel to consolidate them into a round of clarifications.
-

7. International expansion and carbon credits (future vision)

The strategy for opening into a new market is shared, together with the advisability of waiting for greater technical maturity to strengthen credibility and compliance. The potential future line of carbon credits linked to reforestation is discussed as an advanced phase.

Agreement

- It is agreed that the opening of the new market will be postponed until demonstrable technical maturity is available (frontend and initial contract deliveries).
 - It is agreed that the reforestation and carbon credits line will be kept in reserve until later phases.
-

8. Commercial activation: airdrop and weekly cadence

A commercial traction phase is launched based on a Merits airdrop and a weekly cadence of community activities, including ambassador training, AMA sessions, and onboarding support.

Agreement

- It is agreed that dissemination of the airdrop will begin immediately by all Committee members and community leaders.
 - It is agreed that the weekly cadence (training, AMA, first steps/support) will be kicked off and that an updates session will be prioritized to reinvigorate the community.
-

9. Token launch: dates and progress visualization

The time frame for launch and the visualization of objectives are defined. The closure of the presale and the claim window are set, and the implementation of progress counters on the website/app is proposed.

Agreement

- It is agreed that the closure of the presale at the end of 2027 and the opening of the claim at the beginning of 2028, with an estimated sixmonth window, will be communicated as objectives, subject to adjustment based on technical or regulatory criteria.
 - It is agreed that project and community progress indicators will be implemented in the app/website with nontechnical explanatory messages; any detailed economic information will be kept to internal channels.
 - It is agreed that these markers will be used to reinforce shared community responsibility in achieving milestones.
-

10. Treasury and multisig: establishment and signature procedure

It is reported that treasury operations are being strengthened and that multiparty controls and execution flows are being consolidated, with details in internal documentation.

Agreement

- It is agreed that treasury roles and procedures will be formalized to ensure operational continuity, with details in internal documentation.
 - It is agreed that the multiparty custody scheme and its signature and execution procedure will be reinforced, reserving operational details for internal documentation.
 - It is agreed that the traceability of each release (transaction hash and internal approval reference) will be recorded internally, avoiding identifying signatories in public communications.
-

11. Public identity, LinkedIn, and social media

The standard of public exposure and the professionalization of social media presence are raised. Reasonable minimum levels of visibility and their alignment with the project's current stage are considered.

Agreement

- It is agreed that the project's institutional presence on social media will be enhanced with updated information on roles and functions, without linking personal profiles except with explicit consent and operational need.
 - It is agreed that task allocation will be adjusted according to the level of public exposure each role can assume, with communication via the internal channel.
 - It is agreed that, in addition to LinkedIn, the team will join the project's main social channels to amplify outreach.
-

12. Transparency, financial minutes, and community reporting

The transparency framework is agreed upon: regular communication of progress and strategic decisions, while keeping detailed figures in internal minutes. A general historical record and a monthly cadence are proposed.

Agreement

- It is agreed that a general historical treasury record will be drawn up and that, going forward, monthly treasury minutes with treasury signoff will be produced.
 - It is agreed that progress, milestones, and strategic decisions will be communicated to the community, keeping detailed figures in internal minutes.
-

13. Governance framework and community participation (DAO)

The path toward decentralization is clarified: the DAO phase will be activated with onchain operations after the claim. Until then, the founding Committee will maintain operational decisionmaking.

Agreement

- It is agreed that communication will state that the DAO phase will begin after the onchain claim; until that time, decisions will rest with the Committee.
 - It is agreed that, once onchain, major decisions will be submitted to the DAO, with the Committee retaining daily execution and management.
-

14. Miscellaneous operational matters

Lowpriority logistical matters and internal coordination reminders are reviewed, prioritizing the execution of critical tasks for the period.

Agreement

- It is agreed that key operational actions (multisig, signatures, indicators, airdrop) will be prioritized over nonessential inperson meetings.
 - It is agreed that the communication of absences will be centralized in the Committee's internal channel.
-

15. Closing of the session

With no further matters to discuss, the session of the Governance Committee is hereby adjourned.
