

MINUTES N° 029

Governance Committee ZERO Energy

Date: September 9, 2026 **Time:** 9:00 AM **Modality:** Virtual

1. Opening of the session

The Governance Committee convenes its weekly meeting with five items on the agenda. Prior to addressing the formal agenda items, two announcements of relevance to the project are made: the incorporation of a new member to the executive committee and an update regarding the intensification of internal work.

2. Incorporation of a new member to the Executive Committee

The committee formally welcomes a new member with a financial and institutional profile, bringing extensive experience in capital markets, digital asset regulation, and blockchain. The new member holds qualifications from internationally recognised institutions and has a background in financial sector regulatory bodies, as well as in the academic and university sphere. Their incorporation strengthens the institutional and regulatory dimension of the project, particularly in international markets.

The new member will be fully integrated from the next session onwards. Their participation will be adapted to the coordination needs of the committee.

Information

- An official welcome is extended to the new member of the executive committee.
 - The new member has expressed particular interest in the real-time energy production verification mechanism via oracles and smart meters, considering it a differentiating element of the project.
 - It is agreed that their full participation will commence at the next weekly session.
-

3. Strategy for participation in in-person events

The committee analyses the advisability of organising its own in-person events in Madrid during the last quarter of 2026, as well as the possibility of participating in externally organised crypto events already scheduled. Reference is made to the two in-person events previously held in Madrid, which attracted between 50 and 60 attendees and fulfilled their visibility objectives for the current phase of the project.

An in-depth discussion is held regarding the opportunity cost of in-person events in relation to the necessary focus on the digital acquisition tools currently under development. The committee also analyses different modalities of presence at external events (own organisation, sponsorship, attendance as visitors), as well as the various audience profiles targeted by the project at this stage.

Conclusion

- It is agreed not to organise an in-person event in Madrid in the short term, prioritising the development of digital tools and the consolidation of the platform.
 - It is agreed not to participate as a sponsor in external events at this time, given that the current focus must remain on the automation of the airdrop process and digital acquisition.
 - It is agreed to explore the possibility of attending upcoming crypto events in Spain as visitors, with the aim of networking without incurring sponsorship costs.
 - The possibility of organising an in-person event in December 2026 is left open, subject to improvement of the project's operational situation.
 - It is agreed to explore participation in an upcoming crypto event in Spain, pending confirmation of details.
-

4. Status of technological development and airdrop tools

The committee receives an update on the current status of the project's technical development. Significant progress made over recent weeks across several key areas is reported.

Information

- A training academy has been developed, featuring a course structured across multiple modules, currently under review and visual improvement.
- Automation tools for the airdrop process have been created.
- A comprehensive technical document covering the project's tokenomics, smart contract architecture, and presale structure is available.
- The platform has a first functional version, which is currently in the process of stabilisation and improvement.

Agreement

- The committee agrees that the immediate focus is to complete the tokenomics, stabilise the platform, finalise the academy modules, and automate the airdrop process.
 - It is established that participation in specialised crypto events will only be considered once these elements are fully operational.
-

5. Acquisition strategy and presale phase

The committee analyses the current status of the presale phase and the acquisition strategy targeting retail investors.

Agreement

-

It is agreed to intensify retail investor acquisition efforts through the channels enabled by the project, within the framework of the project's acquisition strategy.

- The target investor profile at this stage is the retail investor with an interest in the energy and blockchain sectors, in line with the project's value proposition.
 - It is noted that the special conditions of the presale phase are of limited duration, in accordance with the terms published on the project's official channels.
 - It is agreed to ensure that all collaborators and partners of the project are aware of and fully understand the current conditions of the presale phase.
-

6. Closing of the session

With no further matters to discuss, the session of the Governance Committee is hereby adjourned. The next meeting will take place the following Wednesday at 9:00 AM (Madrid).
