

MINUTES N° 027

Governance Committee ZERO Energy

Date: 26 August 2026 **Time:** 9:00 AM **Modality:** Virtual

1. Opening of the session

The session is opened with the objective of conducting a comprehensive follow-up on the pending items from Minutes N° 028. The main working blocks are: landing pages, team profiles, partners, and Airdrop. The session is of a review and task-closure nature.

2. Status of landing pages — Team photographs

The committee reviews the status of the team photographs for the presentation landing page. A unified criterion for format and framing is established for all team photographs, ensuring a coherent and professional presentation.

Agreement

- All photographs are standardised to the same format and framing to ensure a coherent and professional presentation.
 - Only photographs that have been expressly submitted or authorised by each individual are used. Those still pending are requested directly.
-

3. Status of landing pages — Testimonials

The status of the testimonials section of the landing page is analysed. The collection of testimonials is ongoing; the process is expedited through the drafting of texts for review and approval by each individual.

Agreement

- Testimonial texts are drafted by the team and sent to each individual for their review and approval, thereby expediting the process without depending on the individual initiative of each contributor.
-

4. Status of the Partners section

The committee reviews the progress of the partners section on the landing page. The main partners are defined; descriptions and the specification of the benefit provided by each collaboration remain pending.

Agreement

- Only confirmed collaborations are developed, including logo, description, and benefit. Unconfirmed collaborations are placed on hold.
 - No partner promotion is published unless formally confirmed.
 - The process of formalising authorisations for the use of logos is initiated progressively, without blocking the overall progress of the page.
 - Logos are maintained in their original colour provided this does not compromise the overall design.
-

5. Technical incident — Numerical formats on the platform

Two incidents are identified relating to the display and validation of numerical amounts on the platform.

Conclusion

- The error message displayed when an incorrect numerical format is entered (comma vs. decimal point) is insufficiently descriptive. It must clearly indicate the format expected by the system in order to avoid user confusion.
- An inconsistency exists in the display of amounts between the data entry screen and the transaction history section. Both must display the same format to ensure visual coherence.

Agreement

- The numerical format error message is reviewed and improved.
 - The inconsistency in the display of amounts across screens is corrected.
-

6. Technical update — Infrastructure preparation

The committee establishes as a priority the full operability of all technical infrastructure before an upcoming deadline, on an urgent basis.

Agreement

- The technical review of the infrastructure is completed on an urgent basis, prior to the date of the planned event.
 - Tutorials for the new infrastructure are prepared in parallel so as to be available at the time of the transition.
-

7. Community section on the landing page

The committee discusses the structure and scope of the people/community section on the landing page. The possibility of expanding this section beyond official ambassadors is raised in order to reflect the diversity of the community.

Agreement

- The section is not limited to official ambassadors; it may include any community member who wishes to participate, provided their express authorisation is obtained.
 - The process begins with a manageable number of already available profiles and is expanded progressively.
 - The format must be scalable (gallery or carousel) to accommodate the growth of the section.
-

8. Visual design of the Airdrop — Background and icon

The visual elements of the Airdrop landing page are reviewed: the current background and the newly available icon.

Agreement

- The current background (world visual element) is retained. Token-related elements are added to convey a sense of movement without overloading the design. The background is intended to complement the content, not to dominate it.
 - The new icon replaces the previous one across all pages and social media channels where applicable. Both versions of the icon are not to be used simultaneously.
-

9. Structure of the team landing page — Introduction and roles

The structure of the team landing page is agreed upon, including an introduction to the project's governance and the definition of each profile's role.

Agreement

- A brief introductory text is added below the team section heading, explaining the governance structure of ZERO Energy and the role of the Committee at this stage of the project.
 - Each profile displays name, role, and a summarised function. Extended texts are reserved for the training materials.
 - Roles are validated prior to publication to ensure coherence with the current structure of the project.
-

10. Events gallery

The committee agrees to include a gallery of photographs from past events on the landing page to showcase the project's track record.

Agreement

- A gallery (not a carousel) is included featuring photographs from 2024 onwards, selecting the most representative images of events, interviews, and team activity.
 - The process begins with a limited number of images and is expanded if necessary. Should the volume grow, the format is adapted accordingly.
-

11. Structure of the Airdrop landing page — Content order

The order of the content blocks on the Airdrop landing page is discussed and agreed upon.

Agreement

- The landing page is structured by presenting first the benefits for the participant and then the steps of the process, in the following order:

1. **What the participant will receive:** tokens, benefits from project collaborators, and training. 2. **What the participant must do:** the steps of the participation process.

- References to confirmed collaborations will be included to provide context and credibility to the participant, provided that such collaborations have been publicly communicated beforehand.
-

12. Relationship between the Masterclass and the Airdrop

The relationship between the two available pathways for participants — the Masterclass and the Airdrop — is clarified.

Conclusion

- The Masterclass and the Airdrop are independent pathways, each with its own reward.
 - Both rewards are cumulative.
 - A participant who first accesses the Masterclass and subsequently the Airdrop will not be required to repeat the sections already completed.
 - This logic must be clearly explained on the landing pages and in all project communications.
-

13. Title of the training programme

The definitive title of the project's training programme is confirmed.

Agreement

-

The title of the training programme is "**Behind the Token**". This title shall be used in all references: landing pages, communications, and project materials.

14. Closing of the session

With no further matters to discuss, the session of the Governance Committee is hereby adjourned.
